

Tsinghua iGEM 2010 Safety Manual

Hello,

Guys from Tsinghua iGEM 2010.

Before we can conduct our experiments, we need to be aware of something important for our experiments and safety while we are carrying out experiments. Here are some rules we must obey and some documents we must sign by ourselves.

To be allowed to conduct experiments every student must have a safety induction lesson about safety in the laboratory. As we are all second year, third year and fourth year undergraduates, we have already had the lessons special in the techniques in the labs as well as an induction of safety and techniques lectures as part of those lessons, we will take a short exam about this safety issue a few days later to confirm that everyone knows about the safety.

And to be allowed to conduct experiments in biological laboratories, we are required to obey the rules in the document of Tsinghua Laboratory Safety Policy and we are required to sign it.

And to be allowed to conduct experiments in the laboratories in the School of Life Science, we are required to register on the Registration Desk.

After we have done all of the above, please keep safety issue in mind all the time, it is both

Tsinghua iGEM 2010 Safety Manual

good for you as well as for the people around you and even for the whole environment around us.

Some special requirements:

1. The gloves must be worn all the time during the experiment period in the Lab.
2. The lab coat is recommended and must be worn when dealing with some corrosive matters.
3. Being drunk is not allowed in the lab.
4. Put away the stuff you have ever taken out or used.
5. Discard the rubbish and waste carefully and wisely, more importantly, according to different classes.

Hope everything goes well with your experiments.

All Best

Tsinghua iGEM 2010
