

7.13.10

Meeting Minutes

Erin/Meagan: got 6 bands on the gel today!!!! If anyone has a chance, look over the lamB primers since this is the only one not working

Amanda/Tom: maybe reordering primers since they might be contaminated. Try to aliquot and dilute to 10 micromolar.

Matt/Steve: Matt's gonna start doing some stuff on his own. Starting stuff over since nothing's worked.

Bob/Francis: most stuff PCR-ed out. Waiting on a certain strain.

Fundraising: We need to chalk the quad, and make sure we have all the supplies for dip n' dots for next Wednesday. We should figure out how much liquid nitrogen we need for a pint of ice cream. Maybe 2 pints liquid nitrogen per pint of ice cream. We should use a whisk or big spoon for stirring. Make sure we keep track of how much we use of everything so we can calculate stuff for the sweet corn festival. Soooo 30 gallons of liquid nitrogen maybe?? Meagan's gonna make a flyer. With any luck Erin will remember to make a facebook event.

Matt will send out abstract to everyone, check it over, make suggestions by Thursday.

Friday at noon, meeting with Courtney about assaying metals.

Bob will talk to people about calibrating pipettes

GAMES camp meeting Monday morning with Joanne.
