

6.29.10

meeting minutes

Before sticking stuff in the negative 80, stick it in liquid nitrogen or dry ice.

Dip n' dots worked!!

Meaghan/Erin—hopefully tomorrow we'll put promoters with gas vesicles and efflux system.

Steve/matt—digestion today, xba and spe might not be working. They're testing them today. The only ones we know for sure work are ecoRI and pstI.

Tom/Amanda—pretty much starting over.

Tomorrow meeting with Dr. Rao at 2:00 at his office. People who worked on fusion and ars primers should go.

Backbone—maybe the annealing temp is too low or the primers are contaminated.

Order RFC 10 primers. Buy more plates. Buy more small pipette tips. Fill tips on weekend.

We need more e. Coli colony boil.
