

Microscopy test

This protocol aims at preparing glass slides for observation of biofilms with a fluorescent microscope.

Procedure

1. In empty sterile plates, introduce 10mL of M63G medium and 100 μ L of appropriate antibiotic.
2. Add 100 μ L of bacteria from a saturated liquid culture.
3. Finally, add 3 or 4 sterile glass slides with a sterile tweezer.
4. Incubate at 30°C overnight.
5. Observe the slides with a fluorescent microscope.
