

## iGEM 2012 Survey

Age: 11-20 21-30 31-40 41-50 51-60 61-70 +70

Gender: M/F

Country of origin?

Degree or currently working/studying in the areas of Math, Science, Technology or Engineering? YES NO

**#1: Do you know what Golden Rice is? Explain what you know.**

Understanding: (none) 0 1 2 3 4 5 (very good)

**#2: Would you eat Golden Rice?**

**This is on a scale of 0-5 with 5 being the highest score.**

(unlikely) 1 2 3 4 5 (very likely)

**#3: Would you eat genetically engineered rice that contains other essential vitamins lacking in our diet, such as thiamine or folic acid?**

(unlikely) 1 2 3 4 5 (very likely)

**#4: Which of the following would you eat?**

**Vitamins added to the rice as a powdered supplement?**

YES-ADD LATER NO PREFERENCE PREFER Genetically Engineered RICE

**#5: Unlike wheat flour and cornmeal, much of the white “polished” rice consumed DOES NOT have thiamine and folic acid added after milling. This is because these vitamins are water soluble and are easily washed out during the milling process or during home preparation. Our project is to add a binding protein after the milling process that will help vitamins bind to white rice.**

**Would you eat white rice that contains this additional protein IF the protein was found to be non-toxic to humans?**

(unlikely) 1 2 3 4 5 (very likely)
