

## 2013.9.08 meeting memo

**Time:** 2013-09-09 Monday

**Location:** Room 105, Chemistry Building

**Moderator:** Tina Zhang

**Recorder:** Kaiyuan Ni

Xiyu Wu and Zhaopeng Cheng are absent with leave.

1. Calling card: please shorten your major because it takes too much place.  
And please adjust scripts and size.
2. Mascot. Why a square head? It's a little... awful. Mengna Tan is tall and she decided to wear costume as mascot. Maybe we can add two big square shoes to the body... We can make glasses for Fangfang with plates. And we can mix Bo Bing elements into design.
3. Wiki. Platform before September 15<sup>th</sup> and we can put texts and pictures on our wiki.
4. Experiments for mixing different bacteria. A little complex so we should make a clear protocol before we perform the experiment.
5. Tomorrow morning the prototype of BL21 will arrive.
6. Now many phenomena indicate that we have a bright future. MULDI indicates that all bands on SDS-PAGE gel pictures moved up. So our construction is right and expression of protein is right as expected.
7. We won't send our biobricks until XMU-Software's biobrick is done.
