Find A Microbe!

Between today and next session research a microbe that you find interesting. We have given you some guidelines of what information you should look out for and we have given you some useful start points for finding a microbe that might interest you.

Starting points

- What microbe causes bread to go mouldy?
- What microbe is used to make beer?
- What microbe makes cows burp methane?
- What microbe causes strep throat?
- What microbe does the antibiotic Penicillin come from?
- What microbe makes stagnant water turn green?

These are just some starting points, don't be afraid to think of your own!

Your Microbe!

This is some information you will want to find out.

- What is the name of your microbe?
- What kind of microbe have you found? (Is it a Fungi, a Bacteria, a Mould, a Yeast, an Archaea or something else?)

•	Is your microbe a Prokaryote or a Eukaryote?
•	Where can you find your microbe?
•	What does your microbe do?
•	What is your microbe used for?
•	What is one interesting fact about your microbe?
