## An Introduction to Responsibility within Science

Task One
Define responsibility:
Name three professions that require responsibility:
1.
2.
3.
Define scientific responsibility:
Task Two
Look at the scenarios below and determine which are examples of responsible science and explain
why you think they are responsible or not
1. Before developing new technologies, a team of scientists hold focus groups to hear the input of non-academic voices.

2.	A group of scientists use genetically modified bacteria or stem cell science and inform the media early on in the research.
3.	A group of scientists decide on a research project and pursue it even when alternative options and opinions are suggested.
4.	A team of scientists collaborate with other academic researchers from across the world to find out if prior research has already been done.
5.	A group of scientists consider whether the research they are doing could impact the societal, environmental and economical landscape before conducting the research.
5.	
5.	
5.	
5.	

**Extension:** Suggest two more examples of responsible science.
