## Cell splitting:

HEK 293 T cells were splitted according to cell splitting protocol.

Measurements from cell counting:  $3 \times 10^6$  cells/mL

Mixed 400  $\mu$ l of cell suspension to 12 ml Advanced DMEM with FBS and put 1 ml in each well

## Seeding:

HEK 293 T cells were seeded onto a 12-well plate.

12 wells were seeded with each well containing  $0.1 \times 10^6$  cells/mL

Incubation at 37°C, 5% CO<sub>2</sub>
