

Inoculating Cultures

1. Clean work surface with ethanol.
2. Light Bunsen burner to create an updraft in the work area.
3. Pipette 5mL of LB media in appropriate number of test tubes.
4. Pipette 5uL of appropriate antibiotic to each test tube.
5. Pick one colony from culture plates using a pipette.
 - a. Discard pipette tip into culture tube.
6. Cap each tube.
7. Repeat for needed amounts of cultures.
8. Incubate tubes in 37 C shaker for ~15 hours.
