

Team Video chat

Who: Whole team

Description:

Hemoperfusion

Neurotoxin

Monoclonal antibodies

antibiotic

Bacteriophages

Allfed—money

(Made notes for video chat 03/01/2019, please correct anything wrong/misheard

Haemodialysis/ Haemoperfusion

Nerve agents

Monoclonal Antibodies for autoimmune diseases

as in for Rheumatoid arthritis

Production in bacteria?

Crystallized domain struggle?

Hard af to make

Biologics for data

Improve production of monoclonal antibodies in bacteria

Bacteriophages

Bacteria suicide (suicide? Not apoptosis?) initiation

Bacteriocide peptide

Using a peptide on the outside of the cell is one system

Other system is also present, but the peptide one is present in almost all bacteria?

Peptides are soluble by different bacteria

This was specifically ones that trigger this response in E. Coli

Biofilms have many different bacteria so not necessarily useful or it

Make Googledoc for brainstorming

Set a date for deciding on a project

Consider projects that are interesting, and that we know a potential supervisor for

Bacteriophages

Pick a Bacterial infection, Try to come up with a good phage therapy

Maybe look where there's money for resources/external supervision

E.g. Allfed

Carnegie scholarship?

Only for scottish students with amazing grades

Maybe use Slack as well as Google Docs

Keep things into separate channels for organization )
