# FEEDBACK

**We think your presentation was awesome!**

Given below is a report of what we liked and what we think might look better

**100%**

**of our team**  
liked the presentation

A summary of the feedback -

Pros -

1. Nice minimalist design
2. Love the 'sewers' theme, looks very personalized, fits perfectly
3. The sequence of the slides, Problem > HP > Analysis > Solution

Suggestions-

1. Add more pictures of the fatbergs!
2. Maybe, add some citations at the end of each slide/end of the presentation.
3. A team picture would look good

# DETAILED FEEDBACK

## Design

The design indeed is awesome. The yellow-white-black color scheme looks exciting. You guys can experiment on other color schemes.

Slides 3, 10, 13 and 16 are the subtopic slides. You guys can try to add different pictures in them. You won't need a different sequence of slides to show how fatbergs look like.

Use a font which looks elegant as well as impactful. The current font is okay, but you guys should try other ones too.

We really like the fact that you guys have really less text in your presentation. But some of us felt that slides explaining how a fatberg is formed, and the slides about your genetic circuit and experiments, might need a tiny bit of text. Your call.

We have some great ideas for designing, hope we'll collaborate on that for mutual benefit ;)

## Content

Your project looks amazing. The problem seems like it requires immediate attention.

You might want to add a bit about how much waste a usual household produces, and how much of it is those 'fatberg - causing' substances. (You can have a pie chart which shows how much of the fatberg is what, and the pie can be the fatberg itself!).

We noticed that you're mainly focused on London for the problem, but a slide (other than the timeline) dedicated to a global view could help.

In one of your slides, you've mentioned that removing a fatberg can cost a lot. So a slide saying how bad a fatberg is, including this fact and others, in a more visually appealing way would be nice.

You can also make the tone a little darker by adding some grim facts and possible consequences to be faced if the problem remains unchecked.

## miscellaneous

Everything else looks amazing on your presentation, and we learnt a lot from it. Especially the fact that we should reduce as much text as possible from our presentation, to have a better impact.

Are the presentations bound to be in a .ppt or .pdf format? We're sure you've heard of '**Prezi**'. Its an online tool to make really cool and engaging presentations, and we're thinking of that as an alternative. What do you think about that?

Finally, we wanted our presentation to be a bit dramatic and entertaining, and not the same plain stuff. But we only have 20 minutes and it's not going to be easy having a very engaging presentation within that time frame. What do you think about this?

Your feedback was really good, and we're working on to incorporate your suggestions. (And I appreciate you liked the crosses, a whole lot of people in the team were against it )

Are you planning to modify the same presentation for the jamboree? What other ideas do you have?

All the very best for your project, and we hope it is successful. See you in the Jamboree!

THANK  
YOU!
