iGEM Team Leiden
Sylviusweg 72
2333BE Leiden

26 October 2020

Dear Sir, Madam,

During the past year, the iGEM Leiden team has worked on a new technology for diagnosing infectious diseases. We, as IDE group, have mentored the students. In our meetings, we advised them about the diagnostics market, the application of their test kit, and important design aspects.

The iGEM Leiden team has expressed their interest in continuing the development of their product. In the future, we would like to offer our help to support the team in designing their test kit and bringing their technology to market.

IDE Group works together to realize innovations and build businesses around these innovations. We help entrepreneurs, doctors, and researchers in the life sciences and health sector to develop new products and companies. We have significant expertise in the diagnostics market, and in the past we have developed a blood test for HIV together with Atomo Diagnostics.

IDE Group believes that the technology developed by team iGEM Leiden could be valuable for diagnosing infectious diseases and for outbreak response. If the team decides to further develop and commercialize their technology, we will gladly support them.

Yours sincerely,

Willem Mees van der Bijl
Director IDE Netherlands
