

Activity #9 ■ Science As Art

Sometimes words aren't sufficient to embody what we are feeling. What if you didn't have to use words? But rather use your hands to create something beautiful and share it with the rest of us. Art is limitless, just like science they both require a certain level of creativity in order to come up with the unthinkable. Set your imagination free and create your own interpretation of Science As Art.

Your objective is to create a work of art that expresses a scientific topic related to what you have learned from participating in all nine modules. This can take the form of any type of art (i.e. sketch, painting, sculpture, music, etc). Upload the pictures to the google form! Once you have uploaded your artwork, complete the remaining questions on the google form.

Remember the only limit to imagination is the barriers you decide to create for yourself.
