

Plating out the cell cultures

1. Centrifugation of the cells (**3310 rpm 5 min**)
2. 1 ml supernatant is taken from the eppi
3. The rest is resuspended and spread on the plates (→ **Basic protocol**: Preparing the plates)
4. Let the plates dry
5. The plates are sealed with parafilm
6. The plates are stored at 27 °C in the incubator
