

**PROTECC
CORAL**

Prevent Reactive Oxygen & Thermal Extreme Causing Carking

Dear iGEM Groningen

Thank you for attending our Biodiversity Symposium on the 15th of July, 2021. On behalf of the Protecc Coral team from the University of New South Wales, it was a pleasure to watch and learn from your presentations.

Thank you for answering the numerous questions that were presented to your team and allowing us to dive deeper into your project despite the limited time. Without your team, it would not have been such a successful event and run so smoothly.

We hope that your team also took pleasure in attending the discussion that we held today. If you had any questions regarding our project or even the event itself, please do not hesitate to contact me directly.

Thank you again for being part of such a wonderful time, we are keen to seeing your final project reveal at the end of the year and definitely looking forward to meeting with everyone again at our virtual Jamboree. We hope you stay safe and healthy, and may you overcome any adversity you face in your projects.

Sincerely,

Karina Guo,

Project Leader of Science Communication

Protecc Coral – Team UNSW iGEM
